

Domain Reconnaissance & OSINT Technical Report

TARGET AUDIT: CERTIFIEDHACKER.COM

Target Domain	certifiedhacker.com	Date Generated	July 5, 2026
Classification	Confidential / Technical Assessment	Assessment Type	Passive Footprinting & DNS OSINT

1. Executive Summary

This technical report delivers a comprehensive analysis of the infrastructure, cryptographic posture, and open-source intelligence (OSINT) footprint of the target domain **certifiedhacker.com**. Utilizing active network telemetry, DNS zone mapping, and historical WHOIS records, this assessment provides data lineage verification across core network dependencies to evaluate external operational exposures.

2. Domain Registration Profile

Passive registrar query intelligence validates standard registration status parameters with active structural locks established to mitigate unauthorized transfers:

- **Registrar of Record:** Network Solutions, LLC (IANA Identifier: 2)
- **Domain Longevity:** Created on July 30, 2002 (Age: >8,700 days active)
- **Registration End Date:** July 30, 2027 (Updated: May 30, 2026)
- **Security Constraints:** clientTransferProhibited explicitly enforced
- **Primary Authoritative Name Servers:**
 - NS1.BLUEHOST.COM (Cluster Population: ~1.89M domains)
 - NS2.BLUEHOST.COM (Cluster Population: ~1.89M domains)

3. DNS Architecture & Infrastructure Topology

Cross-verification across multiple diagnostic utility data sets yields a deterministic map of the core hosting environment:

- **Resolved IPv4 Mapping:** 162.241.216.11
- **Authoritative Pointer (PTR):** Resolves systematically to the canonical host string box5331.bluehost.com via automated recon-ng reverse name queries.
- **Autonomous System Affiliation:** AS31898 (ORACLE-BMC-31898 - Oracle Corporation / Unified Layer Infrastructure).
- **Geographic Endpoint Location:** Provo, Utah, United States.
- **Subdomain Footprint (A Records):** Direct queries for the sub-allocations point cleanly back to the same parent destination infrastructure block (162.241.216.0/22).

4. Public Cryptographic Key Infrastructure (PKI)

Netcraft endpoint data demonstrates the domain's certificate deployment metrics, using standard validation rules designed for automated rotation schedules:

Common Identifier: mail.certifiedhacker.com
Issuing Authority: Let's Encrypt (Intermediate Issuer Key: R12)
Validation Type: Domain Validation (DV)
Perfect Forward Secrecy: Configured & Active (Yes)

Subject Alternative Name (SAN) Scope: The active certificate configuration asserts authority across seven explicit endpoints, safeguarding both structural administration panels and standard web routing layers:

- autodiscover.certifiedhacker.com
- certifiedhacker.com
- cpanel.certifiedhacker.com
- mail.certifiedhacker.com
- webdisk.certifiedhacker.com
- webmail.certifiedhacker.com
- www.certifiedhacker.com

5. Service Banner Fingerprinting & Telemetry Profile

Automated network summary matrices capture underlying operational technology instances across tracked global database nodes:

Category	Observed Technical Fingerprint	Instance Count
Server Banner	Apache Web Platform	76
FTP Banner	20- Welcome to Pure-FTPd [privsep TLS]	38
SSH Banner	SSH-2.0-OpenSSH_8.7	38
WAF / Proxy	Cloudflare Platform Proxy	7
Core Routing	AS31898 (Oracle Corporation)	38
Edge Routing	AS13335 (Cloudflare, Inc.)	3

Active routing diagnostics tracing via outbound traceroute vectors show a successful, standard packet path progression across multi-hop commercial transit tiers (such as atlas.cogentco.com) before clean ingress termination inside the target Bluehost platform node boundary.

6. Auxiliary Identity Tracking Footprint

As part of an independent passive reconnaissance exercise, identity extraction tooling (utilizing the **Sherlock** CLI platform framework) was deployed against a test string target profile ("Elon Musk"). This baseline validated positive accounts across multiple third-party developer networks, forum hubs, and coding spaces, including Apple Developer, Airiners.net, Codeforces, and GeeksforGeeks. This exercise establishes baseline platform capability mappings for downstream correlation procedures.
